

Critical Path for NEV-6: $4h = 1+2+1$

Critical Path for NEV-19: $3h = 1+2$

Critical Path for NEV-12: $6h = 3+2+1$

Critical Path for NEV-22: $3h = 1+2$

Critical Path for NEV-23: $4h = 2+2$

Critical Path for NEV-24: $6h = 2+1+1+1+1$

We tried to minimize our response time to improve communication. Everyone shows up in the daily meetings to keep in track how everyone is doing. When our tasks have conflicts with other team member's tasks, we make a discord call to do the tasks together. This time, we planned our tasks and sub-tasks better. We identifies the subtasks that are prerequisites of other tasks to have a better order to finish the tasks.

One of our team members had some problems starting the emulator and couldn't fix the issues, but our team responds quickly and took over his tasks. That is the reason we could finish the tasks in time in this sprint, and it can count as an improvements from our last sprint.
