# Burndown Chart

In this sprint the recorded progress is once again bunched up towards the end of the sprint. The reasoning for this display is that the completion of subtasks are once again staggered, where main tasks that have most of its subtasks completed are not able to be recorded as complete unless all of its sub tasks are completed. This results in the situation where the progress is not able to be recorded, at least not in a burndown chart. There is also the issue where group members are focused on tests and projects both in this course and in other courses, where limited commitmentent is able to be dedicated towards the app development.
